DECLARATION

To whom it may concern

Mendes SA hereby declares that the product Sivomixx (both stick and micro capsules format) has been tested at different temperatures to ensure the stability. Recommendation is to store the product refrigerated (2-8 °C) in order to maintain the properties until the expiry date indicated on the box.

However product was also tested after being exposed at different specific conditions (25 °C and 40 °C). Tests conducted at these temperatures show that a product stored at room temperature (around 25°C) maintains all the properties if the exposition does not exceed a period of 7 days. On the other hand this period can not be longer than 48 – 72 hours if the temperature reaches 40 °C.

In conclusion, if the product is accidentally exposed at these conditions no longer than these indicated timing, it maintains all the properties.

Sincerely

Florence Pryen
