

## DECLARATION

To whom it may concern

Ormedes SA hereby declares that the product SivoMixx (both stick and micro capsules format) has been tested at different temperatures to ensure the stability.

Recommendation is to store the sticks refrigerated (2-8°C) in order to maintain the properties until the expiry date indicated on the box.

However, the product in stick was also tested after being exposed at different specific conditions (25°C and 40°C). Tests conducted at these temperature show that a product stored at room temperature (around 25°C) maintains all the properties if the exposition does not exceed a period of 7 days. On the other hand, this period can not be longer than 48-72 hours if the temperature reaches 40°C.

Ormedes SA also declares that the product SivoMixx micro capsules 10B in CSP vial has been tested at 27°C to ensure the stability. Recommendation is to store the product at room temperature (up to 25 °C) in order to maintain the properties until the expiry date indicated on the box. Tests conducted at 27°C show that the product maintains all the properties for 18 months and complies with the range of acceptable concentration values when stored at these conditions.

In conclusion, if the products are accidentally exposed at these conditions no longer than these indicated timing, they maintain all the properties.

Sincerely

Florence Pryen

A handwritten signature in black ink that reads "F. Pryen". The letters are cursive and connected.
